Art Unit: 3641

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-4, drawn to an apparatus and method for accelerating a projectile,
     classified in class 89, subclass 8.
  - II. Claims 5-7, drawn to an apparatus and method for accelerating a projectile in combination with a sabot, sabot stopper, compression chamber, and second barrel, classified in class 102, subclass 520.
  - III. Claim 8, drawn to an apparatus and method for acceleration a projectile in combination with a sabot, a sabot stopper, and a leveraging assembly, classified in class 89, subclass 14.6.
  - IV. Claim 9, drawn to an apparatus and method for increasing the rate of oxidation of charges, classified in class 102, subclass 202.5.
- 2. The inventions are distinct, each from the other because:
- 3. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as utility absent a sabot. Further, invention II has separate utility such as utility absent a successive projectile accelerating arrangement. See MPEP § 806.05(d).
- 4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as utility absent a leveraging assembly. Further, invention III has separate utility such as utility absent a compression chamber and/or a second barrel containing a projectile. See MPEP § 806.05(d).

Art Unit: 3641

- 5. Inventions I and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as utility absent multiple bridge wires to initiate at the same point. Further, invention IV has separate utility absent a successive projectile accelerating arrangement. See MPEP § 806.05(d).
- 6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their different classification and their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Johnson whose telephone number is 703-306-4158. The examiner can normally be reached on Tuesday through Friday. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone can be reached on 703-306-4198. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-306-4177.

The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9326. The fax phone number for after final communications is (703) 872-9327.
